

GREVILLEA

LONG FLOWERING NATIVE PLANT!

In the '*Grevillea*' genus there are some 250 species of evergreen trees and shrubs classed in the Proteaceae family.

Variable in habit, height, foliage and flowers, *most grevilleas are native* with some exceptions originating from New Caledonia and Papua New Guinea.

Magnificent flowers in varied shapes and forms. Most have *long flowering periods* whilst some species have shorter but repetitive flowering seasons.

There is also an extensive *Groundcover* range (prostrate) suitable for most gardens and affective as moisture retention & weed suppression.

CULTIVATION

Grevilleas prefer *full sun with good drainage*.

Trim spent flowers regularly to encourage blooming, maintain shape and enhance overall growth habit. When planting use **NATIVE MIX** in the planting hole and water over a solution of **SEASOL**, **POWERFEED**, **MAXICROP** or **UPLIFT** to sustain root health and plant longevity.

FERTILISING

Fertilise your Grevillea during the growing season with an application of granular **TROFORTE NATIVES**, **BRUNNINGS NATIVES**, **GARDEN GOLD NATIVES**, **OSMOCOTE NATIVES**, **HARVEST** or soluble **NITROSOL** solution, they also respond well to small amounts of **BLOOD'N'BONE**.

Another bonus feature of the Grevillea in your garden is its ability to attract *Native Nectar Feeding Birds*.

Browse through our lovely range of Grevillea species on the deck in our **Native Section**.
