

CALLISTEMON BOTTLEBRUSH

NATIVE, BIRD ATTRACTING PLANT!

'*Callistemon*' is a member of the *myrtaceae* family and are stunning evergreen native shrubs/small trees making them a perfect addition to the shrub border.

They bear magnificent long-stamened colourful flowers in dense, neatly formed spikes.

Many species have a weeping habit, striking papery bark not unlike those in the related genus *Melaleuca*.

Fantastic for their '**Native Bird attracting**' capabilities (such as small parrots or lorikeets), as the flowers are nectar rich.

Height varies between species selected.

CARE

Full sun preferable with moist soil however **will tolerate poor drainage**. Only marginally frost tolerant.

PRUNING

Light pruning after flowering will help promote vigorous, bushy growth and flowering.

FERTILISING

Feed with a liquid application of **NITROSOL**, **HARVEST**, **OSMOCOTE NATIVE**, **GARDEN GOLD** for **Natives** or **BLOOD'N'BONE** during the warmer months.

Our huge range is located on the lower level of our nursery next to the Grevilleas.

An application of **MAXICROP**, **CHARLIE CARP**, **POWER FEED** or **SEASOL** will help to provide health & longevity.
