

# GREVILLEA

## LONG FLOWERING NATIVE PLANT!

In the '**Grevillea**' genus there are some 250 species of evergreen trees and shrubs classed in the proteace family.

Variable in habit, height, foliage and flowers, **most grevilleas are native** with some exceptions originating from New Caledonia and Papua New Guinea.

Magnificent flowers in varied shapes and forms. Most have **long flowering periods** whilst some species have shorter but repetitive flowering seasons.

There is also an extensive **Groundcover** range (prostrate) suitable for most gardens and affective as moisture retention & weed suppression.

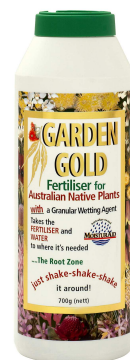

### CULTIVATION

Grevilleas prefer **full sun with good drainage**.

Trim spent flowers regularly to encourage blooming, maintain shape and enhance overall growth habit. When planting, water over a solution of **SEASOL**, **POWERFEED**, **MAXICROP** or **CHARLIE CARP** thus encouraging plant system health and longevity.

### FERTILISING

Fertilise your Grevillea during the growing season with an application of granular **YATES ACTICOTE FOR NATIVES**, **GARDEN GOLD NATIVES**, **HARVEST** or soluble **NITROSOL** solution, they also respond well to small amounts of **BLOOD'N'BONE**.

Another bonus feature of the Grevillea in your garden is its ability to attract **Native Nectar Feeding Birds**.

Browse through our lovely range of Grevillea species on the lower level, **Native Section**.
